Profile – The Province of Antwerp

The province of Antwerp is a regional authority in the north of Belgium with 1.800.000 inhabitants.

Main policy domains we are active in are Environment, Climate, Mobility, Spatial Planning, Economy, Agriculture, Education, Heritage, Leisure & Tourism.

The province of Antwerp has years of experience in EU funded projects, both as partner or coordinator, in programmes H2020, LIFE, COSME, Erasmus+, Interreg, ERDF Flanders and EAFRD. Further, there is a team of EU funding advisors supporting all other departments with their EU project proposals and running projects.

Profile – Logistics Department

The Logistics Department provides the other provincial departments with the necessary resources to perform their tasks efficiently. Its mission is to provide sustainable and well maintained buildings, the department furthermore manages real estate, sets up workplaces, provides office equipment, makes meeting rooms available, ensures customer-friendly reception and security, provides catering and means of transport, ... In short: a comprehensive service package ensures that everyone can function optimally.

The three building project teams (design, project, maintenance) are responsible for project management and realization of construction and restoration projects, from formulating program requirements up to completion and maintenance of the buildings.

The teams also address adjacent outdoor landscaping or road infrastructure.

Acquiring, updating and sharing specific construction-related knowledge and providing advice in the field of project management, restoration and construction are derived from the core activities. The teams are committed to making the provincial portfolio more sustainable.

What we look for in EU projects

We are looking for partners to help us demonstrating highly innovative technologies, processes or products by incorporating them in our building programme 2021-2025

In particular:

Buildings

- environmental and resource saving in building projects
- energy-efficient buildings
- circular construction
- nature-inclusive building
- climate-adaptive building
- bio-based building materials

Energy

- renewable energy generation
- energy transition
- green heat
- sustainable cooling systems
- generation of sustainable energy
- carbon capture utilisation / storage
- energy storage

Water

- infiltration systems, above ground/underground
- rainwater applications and/or greywater applications
- reduction of water consumption
- water buffering

Well being

- healthy indoor climate

Nature

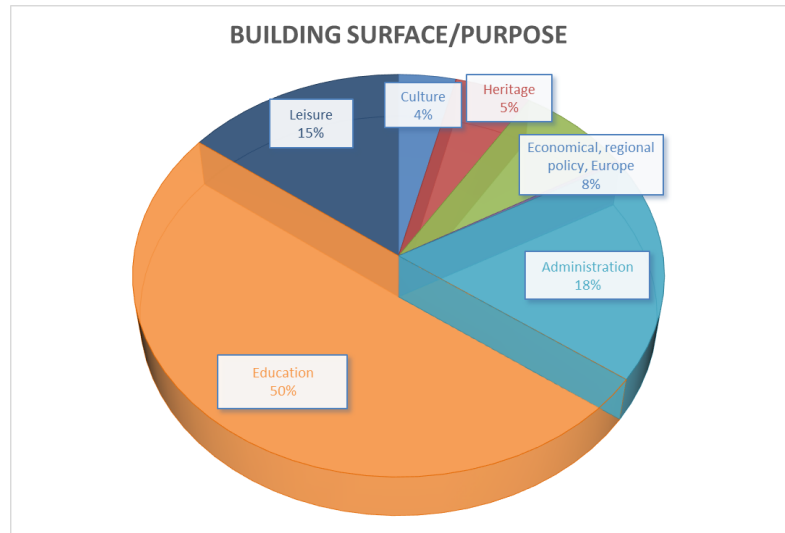

- conservation of nature and biodiversity

What we can offer in EU projects

A patrimony comprising 575.000 m² of buildings, serving a variety of purposes

- 17 educational sites
- 13 sites for sports and outdoor leisure
- Office buildings for the central administration
- Cultural heritage among which 2 cathedrals stand out
- A cultural centre

A mixed bag of building projects (new buildings, renovation, restauration, building maintenance, improvement or renovation of technical installations) with a yearly building budget of appr. 25 MIO Euro

A team of 20 architects and engineers with an increasing interest an knowledge in durability and circular construction.

Experience

Interreg / ERDF:
EFRO KAMP C
